PrivateClaw

PRODUCT DATA SHEET

Personal AI Agent for Enterprise · 100% On-Premise

Softnix PrivateClaw

The AI Workforce Platform for Enterprise — build a “digital workforce” that works alongside your real employees.

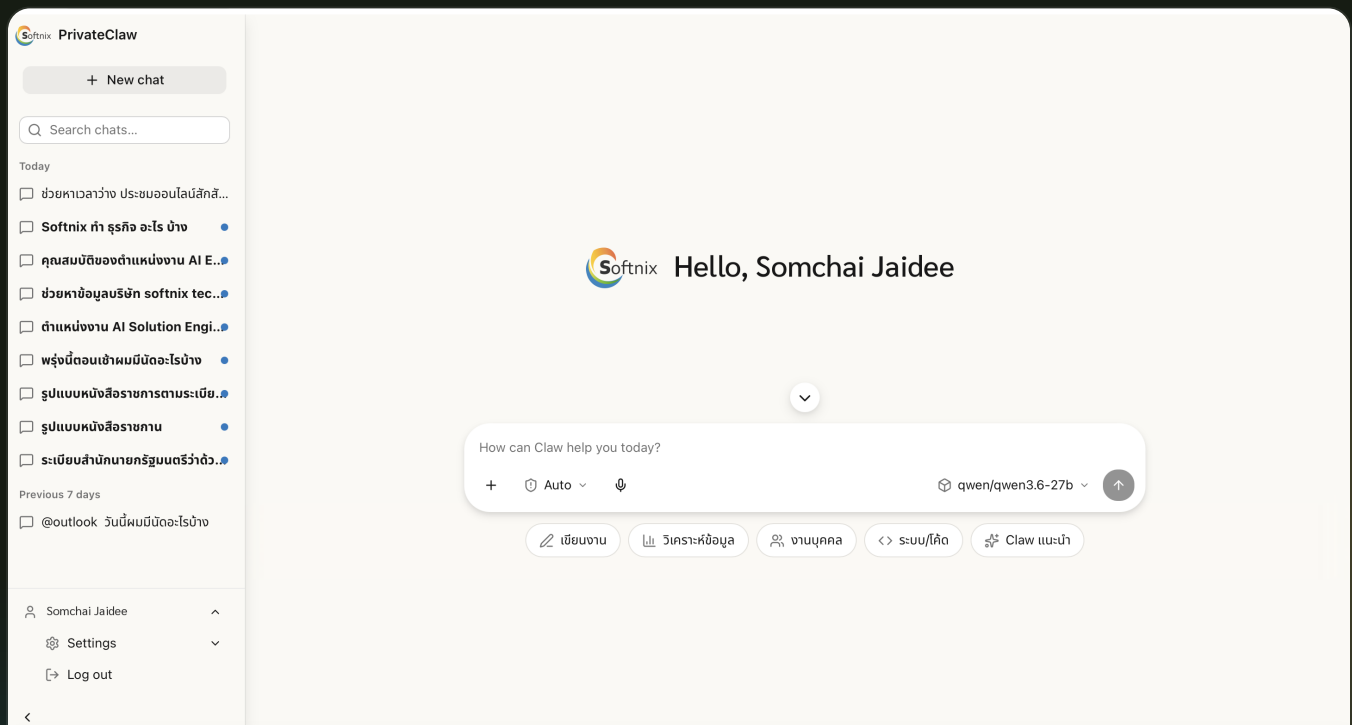

A private AI Agent for every employee, running entirely inside your organization (100% On-Premise). It accesses corporate data securely while keeping business secrets and privacy fully contained within the organization.

Personal AI

Enterprise Knowledge

Autonomous Work · Harness Agent

Enterprise Governance

01 Product Overview

Softnix PrivateClaw is a **Personal AI Agent** that gives every employee their own AI assistant running entirely inside the organization (**100% On-Premise**). It securely accesses internal corporate data while preserving confidentiality and privacy, and features an intelligent **Harness Agent** that works autonomously — both on a schedule and as multi-step workflows — to boost employee productivity.

100% On-Premise

Runs inside your organization on fully in-house LLM models — data never leaves the premises.

Privacy & Security

Keeps business secrets and personal data (PDPA) safely contained within the organization.

Autonomous Work

The Harness Agent works autonomously — on a schedule or as workflows — on behalf of employees.

Self Improvement

Learns from real usage and continuously refines how it works — getting faster and smarter over time.

Organizational Memory

Retains critical skills and know-how inside the organization — knowledge stays even when staff leave.

Enterprise Control Plane

Gives admins full control over AI cost, security, and governance from one place.

What employees get

Summaries & Alerts

Summarizes documents and meetings, and alerts you to important events automatically.

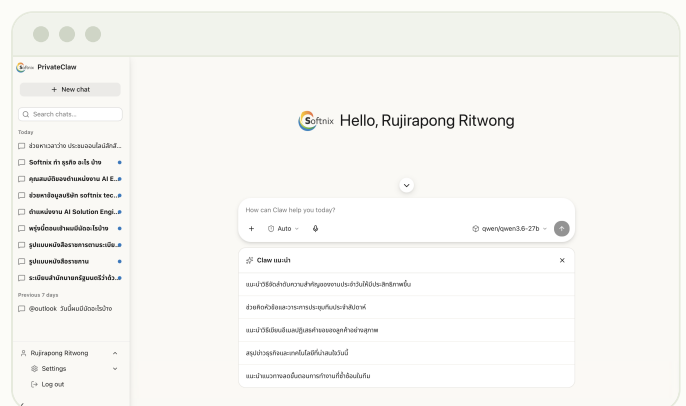

Schedule Management

Helps organize your calendar and appointments via Calendar Connectors.

Conversation Memory

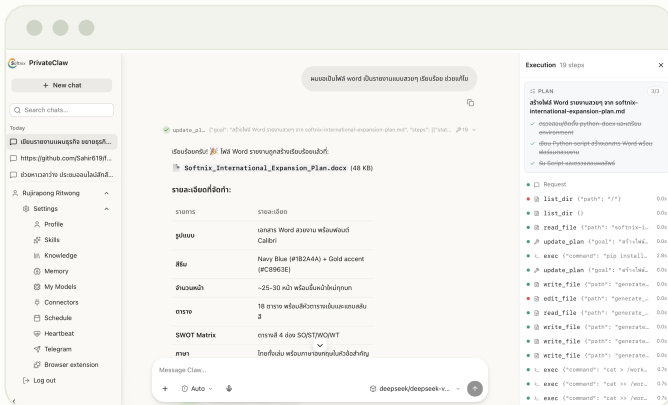

Remembers prior context so work continues seamlessly across sessions.

The home screen with intelligent task suggestions from Claw

Core Capabilities • Harness Agent & Skills

PrivateClaw is more than a Q&A assistant — it is an AI that actually **gets work done**, through the autonomous **Harness Agent** and user-created **Skills** that let the AI perform specialized tasks on your behalf.

The Harness Agent plans and executes work step by step (Plan & Execution), fully automated

Scheduled Automation

Schedule the AI to run recurring tasks automatically — daily summaries, alerts, and more.

Workflow Execution

Runs multi-step workflows end to end, eliminating repetitive manual work.

Self Improvement

Learns from real usage and steadily becomes faster and more accurate.

Enterprise Knowledge

Accesses corporate knowledge and data quickly, within defined permissions.

Skills — let the AI act for you

Users create **Skills** that let the AI perform a wide range of specialized tasks — boosting productivity, cutting costs, and building competitive advantage.

Meeting summaries

Generate quotations

Create reports

Document review

Data conversion

News / Research

Image generation

Draft emails

...and many more

RESULT

Benefits for the organization

Retains employees' key skills in-house · helps new hires ramp up faster · reduces reliance on external providers · and makes AI easy for everyone to access — all while keeping full control of data and security.

Enterprise Control Plane & Governance

Administrators can create a **User Claw** (Personal AI Agent) for each person, set usage policies and data-access permissions, and govern security centrally.

Users & Claw

Create and manage a personal AI Agent for each user in the organization.

Plans & Quota

Set usage quotas per day/month/year and cap spending.

Guardrails (PDPA)

Security policies that filter unsafe, confidential, or personal-data content.

Access Control

Define data- and connector-access permissions at every level.

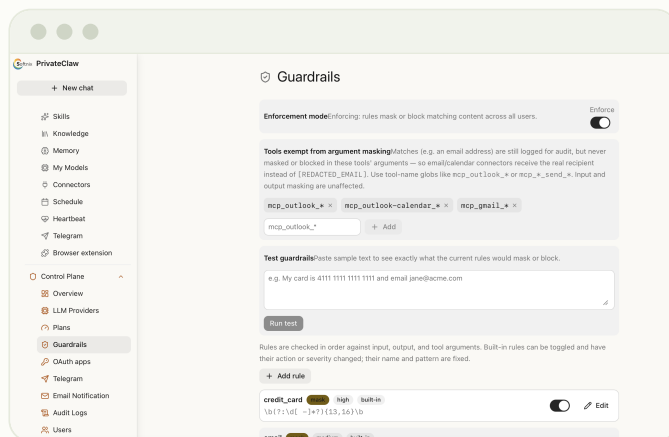

LLM Providers

Add your own models — for example via Token APIs from other providers.

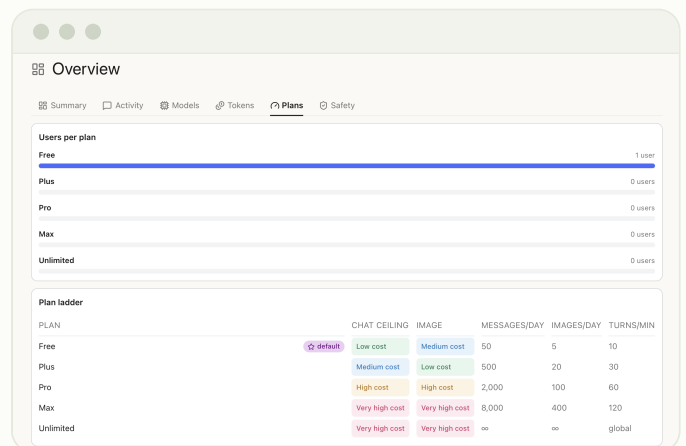

Usage & Audit Logs

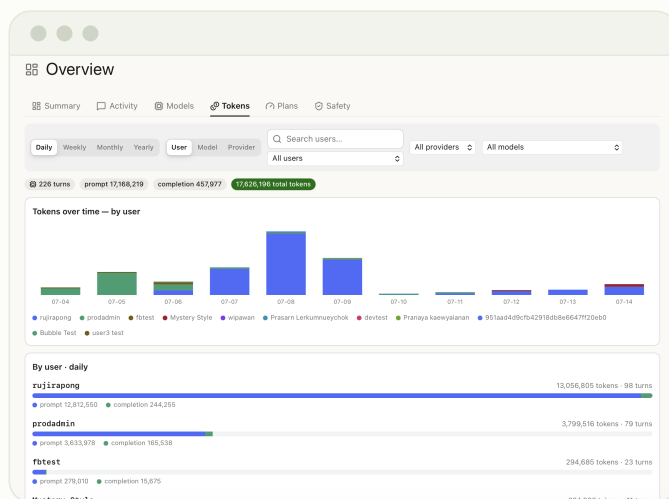

Track token usage, activity, and full audit trails for review.

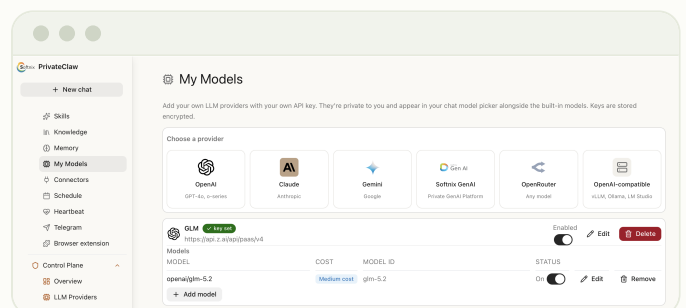

Guardrails — masking/blocking of sensitive data such as credit cards, emails, PDPA

Plan Ladder — set message/image/frequency limits per usage plan

Dashboard analyzing token usage by user / model / provider

My Models — supports OpenAI, Claude, Gemini, Softnix GenAI, vLLM/ Ollama

04 Business Outcomes & Deployment

What the organization gets	Business outcome
Personal AI for every employee	Higher workforce productivity
Organizational Memory	Knowledge is not lost when staff leave
Harness Agent	Less repetitive work through automation
Enterprise Knowledge	Fast data access within defined permissions
Self Improvement	The organization continuously learns and improves
Enterprise Control Plane	Control AI cost, security, and governance
Private Infrastructure	Business secrets and personal data stay in-house

Deployment & Architecture

HPE Server + GPU

Deployed on HPE Servers with GPUs for on-site AI processing.

100% On-Prem LLM

Runs entirely on LLM models hosted inside the organization.

Bring Your Own Model

Add your own models, e.g. via third-party Token APIs.

Enterprise Support

Enterprise-grade post-sales support and assistance.

STRATEGIC VISION

The AI Workforce Platform **for Enterprise**

More than just a “Private ChatGPT” or “On-Prem LLM” — PrivateClaw is a platform for building a “digital workforce” that works alongside real employees, fully aligned with the principles of Sovereign AI, On-Premise deployment, and end-to-end data control within the organization.

Personal AI

A private AI for every employee

Enterprise Knowledge

Access corporate knowledge by permission

Autonomous Work

Harness Agent works for you

Enterprise Governance

Control, govern, and secure
